In a challenging world....
...the natural choice
in feed management

Salgard

Powerful control of pathogenic bacteria in feeds and feed ingredients

Uses

For treating animal feed and feed ingredients to selectively control pathogenic Gram-negative bacteria (such as *Salmonella*, *E.coli*, *Campylobacter*) whilst sparing beneficial bacteria so creating a more favourable microbial balance.

Salgard's long acting effect helps ensure clean feeds remain free from recontamination.

Features

- Powerful multi-purpose anti-microbial
- Controls bacteria and moulds
- Heat stable, long acting
- Safe, non-corrosive
- No residues, resistance or withdrawal
- Available in powder or liquid form

Benefits

- Cost effective microbial control
- Preserves feed quality
- Prevents recontamination of clean feeds
- Contributes to improved environmental hygiene status
- May be used as part of feedmill and silo hygiene programs
- Significant cost saving energy effect
- Economic and versatile

Inclusion Rates

1 kg/tonne	Routine microbial control (in conjunction with a hygiene control programme)
2 kg/tonne	Microbial control (normal feeds)
4 kg/tonne	Microbial control (sensitive feeds)
8 kg/tonne	Heavy contamination
12 kg/tonne	Decontamination of susceptible materials (Fishmeal, Meat and Bone Meal)

Packing

Powder	25 kg bags
Liquid	25, 200, 1000 litre containers
